JORDAN AVERY

DEVOPS / PLATFORM ENGINEER

Tel Aviv, Israel | +972 50-000-0000 | jordan.avery@example.com | linkedin.com/in/example | github.com/example

PROFESSIONAL SUMMARY

DevOps / Platform Engineer with 6 years of hands-on experience. Founding member of a platform team that owns CI/CD and deployment workflows for 14 development teams across 120 repositories and their Kubernetes deployments. Automates everything from runner provisioning to ephemeral environments with GitLab CI/CD, Helm, Ansible and Terraform, on Kubernetes and AWS. Wrote a technical article on zero-touch CI runner provisioning. Hands-on engineer with strong ownership.

PROFESSIONAL EXPERIENCE

Independent DevOps & AI Projects — Oct 2026 - Present

- Built an **autonomous AI agent** on **Claude Code** that runs hourly in the cloud: pulls jobs from 80+ career boards and email via **MCP connectors**, scores fit, and sends each strong match with a tailored, fact-validated CV to **Telegram**.
- Delivered a hardened Kubernetes service (Helm, k3d, Prometheus/Grafana, NetworkPolicy, PDBs) with an **agentic workflow** of Claude Code **subagents**, steered by **context engineering** (CLAUDE.md, skills, hooks).

Platform Engineer — Mar 2023 - Sep 2026

Northwind Cloud (fictional)

- Founding engineer of the platform team: owned CI/CD and deployment workflows for 14 development teams across 120 repositories and their Kubernetes deployments.
- Built shared GitLab CI/CD templates and a Helm chart library that cut a new service's path to production from days to under an hour.
- Ran self-service ephemeral environments on k3d for every merge request, with automated E2E tests.
- Automated CI runner provisioning with Ansible and Terraform, and wrote the team's on-call runbooks.
- Introduced Prometheus/Grafana dashboards and alerts for every service, and led incident reviews.

Backend Engineer — Jun 2020 - Feb 2023

Globex Data (fictional)

- Moved the team's deployments from hand-run scripts to Helm on Kubernetes, with zero-downtime rollouts.
- Built reusable integration-testing libraries and GitLab CI pipelines covering Kafka, MongoDB and PostgreSQL services.
- Developed Java/Spring microservices and Kafka streaming components for a data platform processing events from 30 product teams.

TECHNICAL SKILLS

CI/CD & Automation: GitLab CI/CD, GitHub Actions, Jenkins, Ansible, Terraform, Helm
Cloud & Containers: AWS (EC2, EKS, S3, IAM), Kubernetes, k3d, Docker
Observability: Prometheus, Grafana
Programming & Scripting: Python, Bash, Java
Data & Messaging: Kafka, MongoDB, PostgreSQL
AI & Agents: Claude Code, agentic workflows, subagents, MCP, context engineering

EDUCATION

B.Sc. Computer Science | Example University | 2020
